

陶瓷尋邊器 CERAMIC EDGE FINDER

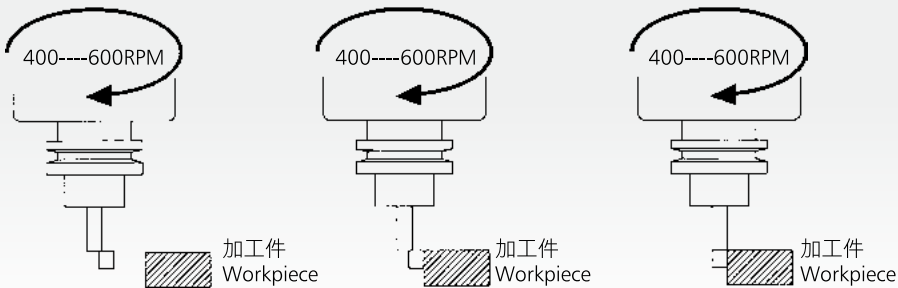

- 主軸迴轉後尋邊器慢慢靠近加工物
- 側定面慢慢移 動至中心後急速偏出點就是測定值
- 移送測定端子 (10mm) 的一半 (5mm) 即主軸與加工面之端面是同一面
- After spindle rotate, edge tool approach work piece slowly.
- After side set face moving slowly to center, rapid excursion point is the measured data.
- Half of the transferred measured terminal is same with the terminal of spindle.
